NOTIS and Seattle Children’s Hospital present

Overview of Pediatric Diabetes

What is this? This 4-hour workshop for medical interpreters focuses on pediatric diabetes. Participants will learn the pathophysiology of diabetes and understand differences in diagnosis and treatment of type 1 vs type 2 in the pediatric population along with key words and concepts associated with these conditions and used during patient teaching sessions. Strategies to navigate safety concerns will be addressed. Nutrition goals and associated eating plans will be taught by a clinical dietitian. The clinical social worker will explore the psychosocial aspects of living with diabetes and strategies to support families through the lifestyle changes required for successful management of diabetes.

Who is teaching? Anne DuLong is a registered nurse and certified diabetes educator and has worked at Seattle Children’s Hospital for close to 20 years. She enjoys the challenges and rewards in working with newly diagnosed kids and their families and showing them they can manage this lifelong disease. Anne volunteers for the American Diabetes Association summer camp program and also works closely with schools in the area to educate them on the basics of diabetes management.

Julie Schliebner is a licensed clinical social worker currently practicing with Seattle Children’s Hospital as a diabetes social worker. Her focus is providing support to children and families who are adapting to living with this chronic illness. Julie also has personal experience having lived with Type 1 Diabetes for 20 years. Julie believes in the inherent strengths and resilience of her patients and works with them from this perspective. Her professional background includes psychotherapy with children, adolescents, families and adults in addition to non-profit program development and management.

Paula Woo is a pediatric dietitian who believes in optimizing well-being through creative and practical nutrition education. She has reviewed and developed diabetes related teaching materials such as a T1D toolkit and carbohydrate counting module as part of an online insulin pump training program. Education material she has developed include an interactive resource for youth with T2D “Eating Smart As Easy As 1,2,3”; and, a four-week cooking program for kidney patients.
